

Your guide to **STREAMING**

embrace *streaming*

Technology is constantly evolving. The way we learn, communicate with each other, purchase items, and receive entertainment has all changed because of technology. Television is not always a form of entertainment; rather, it can be a place to create dreams, learn new information, stay up-to-date with current events, or support your favorite teams. These are all things the evolution of technology has allowed us to enjoy. From the days of only listening to radio or watching stories unfold in the theater, our world has come so far.

Cable TV has come far, and although it has evolved greatly, we have found a way to enhance your viewing experience even more. Streaming is a unique way that unites the concept of internet being the backbone of technology. If our other devices rely on it, why can't our TVs? Streaming gives you the flexibility, ease, and enjoyment that watching TV should.

Making the switch might seem more intimidating than it truly is. Cutting the cable does not mean that you are losing your TV, it just means you get to enjoy it in a different way. This handout is intended to outline the different channel options, features (such as DVR and channel guides), and price points of the many different streaming providers. At the end of the day, it is about what fits your needs best.
